| <b>Date:</b>              |                              |
| <b>Submission Format:</b> | ZIP folder or Git repository |

## Task Objective

Design and develop a modern ERP dashboard for a company that manages sales, orders, inventory, customers, employees, and IT operations.

The purpose of this task is to evaluate:

- Dashboard development skills
- UI/UX and design thinking
- Creativity
- Data visualization skills
- Ability to organize business information
- Responsive design knowledge
- Code quality and documentation

## Scenario

The company needs a central ERP dashboard that allows management to quickly understand the current business situation. The dashboard should present important business information clearly and help users identify problems, risks, and required actions. You may use mock or sample data.

**Important: Focus on a functional, clear, and well-designed dashboard. A complete ERP backend is not required.**

# Required Dashboard Sections

## 1. Overview

- Total sales
- Total orders
- Open orders
- Completed orders
- Cancelled orders
- Total customers
- Total employees
- Low-stock products
- Open IT support tickets
- Monthly operating costs

Use summary cards, charts, status indicators, or other suitable components.

## 2. Sales and Orders

- Daily, weekly, or monthly sales
- Recent orders
- Order status
- Sales comparison with the previous period
- Best-selling products
- Sales by category
- Sales by country or region

Include useful filters such as date range, order status, product category, customer, and country.

## 3. Inventory Management

- Product name
- SKU
- Available quantity
- Minimum required stock
- Stock status
- Supplier
- Last updated date

Clearly highlight out-of-stock, low-stock, and sufficiently stocked products. Include search, filtering, and sorting.

## 4. Customer Management

- Customer name
- Company name
- Email
- Number of orders
- Total spending
- Last order date
- Account status

Include summary information for new customers, returning customers, active customers, inactive customers, and top customers.

## 5. IT Support and Infrastructure

- Open support tickets
- High-priority tickets
- Resolved tickets
- Server status
- Website status
- Backup status
- AWS monthly cost
- Microsoft 365 license usage
- Security warnings
- Upcoming license renewals

Use clear status indicators such as Healthy, Warning, Critical, and Offline.

## 6. Employee and Task Management

- Employee name
- Department
- Assigned tasks
- Completed tasks
- Pending tasks
- Current status
- Performance or productivity overview

Include a simple task list or board with statuses such as To Do, In Progress, Waiting, and Completed.

## Design Requirements

- Modern and professional appearance
- Easy-to-understand information hierarchy
- Clear navigation structure
- Responsive desktop and mobile layout
- Consistent spacing, typography, icons, and components
- Clear warnings and priority indicators
- No overcrowded screens
- Loading, empty, and error states where relevant

You may choose your own colors, layout, icons, charts, and visual style. We want to see your creativity and ability to make business data understandable.

## Technical Requirements

You may use any suitable technology, including React, Next.js, Vue.js, Angular, Laravel, Python with Flask or Django, or HTML/CSS/JavaScript.

- Reusable components
- Clean folder structure
- Mock data or a simple local API
- Responsive layout
- Working navigation
- Search or filtering functionality
- At least three different chart or visualization types

A real backend or database is not required, but the code should be structured so that real APIs can be connected later.

## Optional Improvements

- Dark mode
- Role-based views
- Export to CSV or PDF
- Notification panel
- Global search
- Customizable widgets
- Dashboard settings
- Drag-and-drop cards
- Real-time status simulation
- Previous-period comparison
- Detailed pages for orders, customers, or products

Optional features should not reduce the quality of the main dashboard.

## Deliverables

1. Complete source code
2. README file
3. Instructions for running the project
4. Screenshots of the main dashboard
5. Explanation of the technology used
6. Explanation of the design decisions
7. List of completed and incomplete features
8. Suggestions for future improvements

## Final Demonstration

At the end of the task, briefly demonstrate:

- How the dashboard works
- How the information was organized
- Why the selected layout and visual style were chosen
- Which features were prioritized
- How the dashboard could connect to real company systems
- What would be improved with more time

## Important Notes

- Use only sample or mock data.
- Do not use real company passwords, credentials, or confidential information.
- Do not connect the task to production systems.
- Quality, usability, and clear thinking are more important than the number of features.
- The work should reflect your own technical and creative decisions.
